DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459

(1966), that are applied for establishing a background for determining obviousness under 35

U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 25-31 and 33-52 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Suskind et al., US Patent No. 4,929,498.

Suskind et al. teach a wet wiper in which an antimicrobial solution is added to the pulp/fibers and the agent becomes substantive to the fibers, see abstract. The fibers in combination with non-treated fibers are formed into a treated paper. The web is formed using wet laid techniques and the fibers retain the antimicrobial agent, since they become substantive to the fibers, see column 3, lines 6-47 and example 1. Suskind et al. also teach the use of organosilicone quaternary ammonium compound such as the ones claimed, see column 3, line 49 through column 4, line 53. The amount of antimicrobial agent in the product is within the claimed range, see column 5, lines 40-58 and Suskind et al. teach also the hydroentangling of the cellulosic fibers with synthetic fibers, spunbond, see column 2, lines 10-46. Even though Suskind et al. teach only between 10 to 50% of the pulp of the fabric could be treated with antimicrobial substances. One of ordinary skill in the art would have reasonable expectation of success if all the fibers were treated with antimicrobial substances. Note that they found that if all of the fibers, i.e., 100% of the fiber, are treated with the antimicrobial substance, the levels of microbial killing is about the same as to the one if the levels were between 10 to 50%, see column 7, lines 19. Therefore, using 60 to 90% would have been obvious to one of ordinary skill in the art absent a showing of unexpected results.

Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure in the Art of "Antimicrobial Fabrics."
2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
